Esteban Rojas

AI Solutions Consultant | From AI strategy to working pilots

Medellín, Colombia (UTC-5) · Remote esteban7590@hotmail.com linkedin.com/in/estebanrojasl github.com/estebanrojasl

Software engineer since 2020 and technical consultant for almost four years, covering discovery, scoping, architecture and delivery. I define where AI fits a business, prove it with a working pilot, and enable teams to deliver it at scale.

Close to the edge, not chasing it. I filter what's new in AI down to what actually moves the needle for clients.

SELECTED AI WORK

AI-assisted delivery workflow, USSA (Salvation Army) portal rebuild

- Designed an AI-assisted development workflow for the rebuild of a 9,000-user internal portal (ASP.NET Core, React, Azure, Entra ID).
- Scoped at ~238 hours, delivered in ~70.
- Rolled the workflow out to the Oceans Code Experts engineering team as a shared practice.

Inquiry reply agent, Beach Management Nosara (luxury rentals, Costa Rica)

- Analyzed a year of guest conversations across Airbnb, VRBO and the direct site; found ~$350K in bookings lost to slow or weak replies.
- Designed a human-in-the-loop agent that drafts fast, context-rich replies for staff to approve.
- Took it from data review to signed contract to live agent.

Live call copilot (built for my own client work)

- Personal tool I use on live client calls: suggests the next questions and topics to cover.
- Tracks what's been discussed and flags gaps before the call ends.
- Takes per-call context (who, goals, open topics) so suggestions fit each conversation.

Atlas Pro, commercial real estate intelligence

- Built RAG over map and GeoJSON parcel data so users can query properties in plain language.
- Rebuilt the owner-contact pipeline after testing showed generic B2B APIs found only 5–10% of owners; moved to public-record and property-specific sources, targeting 40–60% at ~$0.30 per lookup.

EXPERIENCE

Oceans Code Experts · Product Engineer

Mar 2023 to present

Remote · Client consulting

- Designed an AI-assisted development workflow and rolled it out to the engineering team as a shared practice; on the USSA portal rebuild, work scoped at ~238 hours was delivered in ~70.
- Took a human-in-the-loop inquiry reply agent for Beach Management Nosara from data review to signed contract to live agent.
- Built RAG over map and parcel data for Atlas Pro and rebuilt its owner-contact pipeline.
- Led Vaquenda's AgTech operations platform, including AI-powered event registration flows, and mentored two engineers.

- Built the MVP of Easy Apply, an AI job application platform, integrating external AI services and leading a small group of dev interns.
- Led the rebuild of the USSA portal for about 9,000 employees, replacing an old WordPress site, with a test environment ready two weeks after approval.
- Architected and led the Beach Management Nosara platform: roadmap, rental-software integrations and infrastructure.
- Led Anytime Sim Golf from estimate to production (May 2024 to present): booking, payments and hardware control for unstaffed golf simulator facilities in Canada. The client now licenses it to other facility owners.
- Built audit and compliance backoffice features for the International Packaged Ice Association (Next.js, Azure).
- Developed a hosted checkout in .NET and React for OpenPath, a payment processing company.
- Owned the backend API and database for GOAT Legend, a sports venue booking marketplace.
- Integrated payment gateways into Pure Advertising's internal reporting app and set up its CI/CD.
- Added features to Musicasa Live, a platform for hiring musicians, and took part in product prioritization.

Snappr (YC) · Software Engineer

Aug 2021 to Mar 2023

San Francisco, remote · In-house

- Worked on an on-demand photography marketplace, taking part in product and data decisions.
- Built a sales tool in about three weeks: a proxy that loads a prospect's website and swaps in photos from our editing pipeline, with a before/after toggle.
- Sales used it with dozens of prospects, Vrbo among them, and it helped close one of the company's five target enterprise accounts.

Other work. Fundación Ideas para la Paz (knowledge platform for Venezuelan youth in Colombia) and Vexi, an EV charging startup I co-founded. Full history on LinkedIn.

SKILLS / STACK

AI	LLM APIs (Claude, OpenAI), RAG, agents and human-in-the-loop design, custom skills, agentic coding loops, MCP, n8n
Engineering	TypeScript/Node.js, React, ASP.NET Core, Kotlin (learning)
Cloud	Azure (App Service, SQL, Entra ID), AWS, Google Cloud (basic), Railway, Docker
Languages	Spanish (native), English (C1, fluent)

EDUCATION

University of East Anglia, MSc Enterprise and Business Creation, 2017 to 2018

Universidad EAFIT, Engineer's degree in Mechatronics, Robotics and Automation, 2016 to 2017

Universidad EAFIT, Bachelor's in Product Design Engineering, 2011 to 2016

Acámica, Full Stack Web Development, 2020

Y Combinator, Startup School, 2023

BACKGROUND

World Solar Challenge 2015: EAFIT Team Primavera, PV concentration system, 9th place, best Latin American result then.
